SR-171 (3500 South) Cooperative Corridor Preservation Agreement

SYNOPSIS:

This cooperative agreement with Utah Department of Transportation (UDOT) designates the location of future traffic signals on State Road 171 (3500 South) in West Valley City. The City and UDOT further agree to study land use, future development and access management along the highway as development occurs.

BACKGROUND:

Access management on our major streets is critical to maintaining and improving traffic flow in and through the City. This agreement was drafted by UDOT officials in cooperation with West Valley City staff to establish signalized intersection locations on 3500 South. The original draft limited the City Center redevelopment area to the existing signals at 2700 West, Market Street and 3200 West. The City's Planning and Public Works staff emphasized the importance of this area and were able to get UDOT to agree to consider an additional signal between Market Street and 3200 West when redevelopment occurs. The location of this future signal will be determined by a traffic analysis based on a proposed redevelopment plan when available.

RECOMMENDATION:

Approve the agreement
